For Greenfield Local Hub

Two Existing Apps/Website

App1: Farmdrop

Farmdrop is an online platform connecting local farmers and producers directly to customers.

Key Features:

- Online ordering for delivery and collection of local food products
- Customer accounts with order history
- Detailed producer profiles and transparency about sourcing and methods
- Promotions, discounts, and seasonal offers
- Secure online payments

Strengths:

- Focuses entirely on local food producers, building trust with customers
- User-friendly interface with clear product availability
- Producers can manage inventory and orders efficiently
- Encourages buying locally, supporting sustainable practices

Weaknesses:

- Limited loyalty program integration beyond basic offers
- Branding primarily centered on the platform, not individual producers
- Delivery may not cover all regions

Relevance to GLH:

Farmdrop demonstrates how an online marketplace can connect customers with local producers, manage orders, and provide product transparency. GLH can adopt a similar model but add a more robust loyalty scheme and a branded system tailored to their cooperative.

App2: Local Food MarketMaker

MarketMaker is a platform designed to help local producers showcase products to consumers and businesses.

Key Features:

- Producer profiles with product details and sourcing information
- Online ordering and product availability display
- Customer accounts with order tracking and history
- Dashboard for producers to manage stock and view orders
- Scheduling and order management features

Strengths:

- Strong focus on local food supply chain and producer visibility
- Provides a complete producer dashboard for inventory management
- Supports a wide range of products and order types
- Flexible for both B2C (customers) and B2B (restaurants, stores)

Weaknesses:

- Limited customer loyalty program options
- User interface is more functional than visually engaging
- Delivery options depend on individual producers rather than centralized logistics

Relevance to GLH:

MarketMaker illustrates effective producer and stock management in a marketplace context. GLH can use similar dashboard and ordering features while integrating loyalty programs, promotions, and a more attractive, customer-friendly interface.

Conclusion of Market Research for GLH:

Existing platforms like Farmdrop and MarketMaker focus on either customer ordering or producer management, but rarely combine all features seamlessly. GLH's digital solution will combine:

- Online ordering for delivery and collection
- Detailed producer profiles and local sourcing info
- Customer accounts with order history
- Promotions and loyalty rewards
- A producer dashboard for stock, product, and order management

This approach ensures a fully branded solution that gives GLH control over both the customer experience and the cooperative’s operations.
