Business Context

Provide a single location retail outlet for locally produced food and drink

The client has asked for a centralized retail location where customers can purchase locally produced food and drink. Without this, local farmers and producers would have no unified platform to sell their products, limiting customer access and reducing the visibility of local produce. By establishing a single retail outlet, GLH can increase sales, provide a consistent customer experience, and support the local food economy.

Enable collective marketing for local farmers and food producers

The client has asked for the digital solution to support collective marketing for all participating farmers and producers. Without this feature, individual producers may struggle to reach a wider audience and compete with larger retailers. By providing collective marketing tools, GLH can increase brand visibility for its producers, attract more customers, and promote the benefits of supporting local businesses.

Support product management, stock control, and product traceability

The client has asked for a system that allows producers and staff to manage product details, stock levels, and traceability information. Without this feature, errors in inventory could occur, and customers may lack confidence in product origin and safety. By implementing product management and traceability, GLH ensures accurate stock control, reduces waste, and builds trust with customers through transparency.

Provide information about producers, their methods, and the benefits of buying locally

The client has asked for the system to provide detailed information about local producers, including their farming or production methods and the advantages of buying local products. Without this feature, Customers may lack confidence in the quality and origin of products. By providing this information, GLH can build trust with customers, encourage informed purchasing decision, and strengthen support for the local food community.

Allow customers to view products with transparent pricing and availability

The client has asked for an online product catalogue that displays clear prices and current stock levels. Without this feature, customers may be frustrated by unavailable products or hidden costs, potentially driving them to competitors. By offering transparency, GLH can improve customer satisfaction, encourage repeat orders, and increase overall sales.

Enable customers to place orders for collection or delivery

The client has asked for functionality allowing customers to order products online for either collection at the retail outlet or home delivery. Without this feature, order processing would need to be handled manually, limiting efficiency and reach. By enabling online ordering, GLH can expand its customer base, streamline operations, and generate consistent revenue.

Allow customers to manage accounts and view order history

The client has asked for an account system so customers can store personal information, track past orders, and manage preferences. Without this feature, customers may experience inconvenience and the business may lose opportunities for repeat sales. Providing account management improves convenience, strengthens customers loyalty, and allows GLH to personalise marketing and offers.

Provide a producer dashboard to manage stock levels, update product details, and view orders

The client has asked for a dedicated dashboard for producers to update product information, track inventory, and monitor customer orders. Without this functionality, producers would struggle to manage their offerings efficiently, potentially resulting in stock errors or missed sales. A dashboard improves operational efficiency, reduces errors, and ensures accurate, real-time product information

Include order management, scheduling, and tracking features

The client has asked for features to schedule and track orders throughout the fulfilment process. Without this, both staff and producers may have difficulty coordinating orders and delivery times. These features enable GLH to maintain timely delivery, improve customer satisfaction, and optimise workflow

Offer a loyalty scheme with discounts and special offers

The client has asked for loyalty program that rewards repeat customers with discounts, special offers, or other incentivise. Without a loyalty scheme, customers may not be motivated to return, limiting long-term revenue potential. By offering rewards, GLH can increase customer retention, encourage higher spending, and strengthen brand loyalty.

Implement accessibility features to support a wide range of users

The client has asked for accessibility features that ensures all users including those with visual, auditory, or mobility challenges can use the system. Without accessible design, some customers may

be unable to use the platform, reducing reach and potentially violating regulations. Accessibility features expand the user base, demonstrate social responsibility, and improve inclusivity.

Project Aim

The clients (owner of Greenfield Local Hub) would like to develop a digital solution that will:

- A single location retail outlet for locally produced food and drink
- Collective marketing for local farmers and food producers
- Product management, stock control and product traceability.
- Provide information about the producers, their methods and the benefits of buying locally
- Allow customers to:
  - View products with transparent pricing and availability
  - Place orders for collection or delivery
  - Manage their accounts and view order history
- Provide a dashboard to enable producers to manage stock levels, update product details and view orders.
- Order management, scheduling and tracking features
- A loyalty scheme that provides discounts and special offers
- Accessibility features to support a wide range of users.

Functional Requirements and User Acceptance Criteria

Customer – The customer is named Emily; Emily is a regular customer at Greenfield Local Hub. She frequently purchases fresh produce and locally made products from the hub, but her schedule is busy, and she cannot always visit the store in person. Emily wants to be able to log into her online account, browse available products, View detailed information about the producers, and place orders for collection or delivery.

Customer- The customer is named James; James is a new customer at GLH. He is organising a one-day event and wants to order a variety of locally produces food and drink for the occasion. He has never purchased from GLH before and wants a simple, easy -to-use online system where he can view available products, check price and place an order for delivery. Having this functionality allows James to confidently select products that meet his needs, complete his order quickly, and rely on the hub to provide fresh, local produce without needing staff assistance

Producer- The Producer is named Anna; Anna is one of the local farmers supplying products to GLH. She needs access to producer dashboard where she can manage stock levels, update product details, and view incoming customer orders. Without this system, Anna would struggle to keep track of inventory and fulfil orders efficiently. By using the dashboard, Anna can ensure products are accurately represented online, respond promptly to orders, and maintain strong relationships with her customers and the hub.

Producer- The producer is named Liam; Liam is a new food producer who has recently joined GLH. He wants to be able to quickly add new products to the system, provide detailed descriptions about sourcing and production methods, and monitor how his products perform. This allows Liam to introduce his products to the community confidently, understand which items are most popular, and adjust stock and offerings based on real customer demand, helping him grow his business while supporting the hub's mission to promote local produce.

Customer- The customer is named Sophia; Sophia is a customer with accessibility needs. She wants to navigate the GLH website easily, View products, place orders, and manage her accounts without difficulty. By providing accessibility features, GLH ensures Sophia can access the same high-quality service as other customers, promoting inclusivity, expanding the customer base, and demonstrating social responsibility.

Functional Requirement	**User Story**	**User Acceptance Criteria**	**Justification**
Register	As James, I want to register an account so that I can securely access personalised features and track my orders. As Anna, I want to register as a producer so that I can add products, manage stock, and view orders.	1. Enter name, email, password (and producer info if applicable) 2. Validate email format 3. Password meets security requirements 4. Confirmation of registration	Users need to register an account in order to access personalised features and services within the system. Registration allows the system to collect and securely store essential information such as names, contact details, and account credential. Securely stored information enables the platform to recognise returning users and identify whether they are customers or producers. Identifying users allows the system to provide role-specific functionality such as ordering products for customers or managing stock and products for producers. Providing personalised features improves usability, convenience, and engagement with the digital platform.

			Higher engagement encourages users to regularly interact with the system, increasing purchases and supporting long-term revenue growth for Greenfield Local Hub and its producers.
Login	As Emily, I want to log in so that I can view my order history, check product availability, and place new orders. As Liam, I want to log in so that I can manage my product listings, update stock, and track incoming orders.	1. Enter registered credentials 2. System verifies credentials 3. Success redirects to relevant dashboard 4. Error message if incorrect	Users need to log in securely access their accounts and personal information. Logging in verifies the identity of the user using their registered credentials. User verification ensures that sensitive information such as order history, account details, and producer data is only accessible to authorised individuals. Secure access allows customers to manage their purchases and producers to manage their product listings and inventory efficiently. An efficient and secure user experience improves confidence in the system and encourages users to continue using it. Regular platform usage increases sales opportunities and supports the long-term growth of Greenfield Local Hub.
Logout	As James, I want to log out so that I can protect my account and personal information when I finish using the system	1. Logout button visible 2. Session terminates 3. Redirect to login/home page	Users need to log out of the system when they finish using it to ensure account security.

	As Liam, I want to log out so that I can protect my account and personal information when using a shared or public device.		Logging out terminates the user's active session and prevents unauthorised individuals from accessing the accounts. Preventing unauthorised access protects sensitive personal and business data stored within the system. Strong security measures increase trust in the digital platform among customers and producers. When users trust a system to protect their data, they are more likely to continue using it for transactions and account management. Increased trust encourages consistent use of the platform, contributing to sustained customer engagement and business revenue.
Password Reset	As Emily, I want to rest my password so that I can regain access to my account if I forget it and continue using the system As Anna, I want to reset my password so that I can regain access to my producer dashboard if I forget it, ensuring I can continue updating stock and fulfilling orders without delay.	1. Request reset via email 2. Receive secure reset link 3. Set new password 4. Confirmation message	Users need the ability to reset their password if they forget their login credentials. Password reset functionality allows users to regain access to their accounts without requiring manual assistance from staff. Providing automated account recovery ensures that users can quickly continue using the system without

			long delays. Reducing delays and frustration improves the overall user experience and reliability of the platform. A reliable system encourages users to rely on the platform for their regular purchases and business operations. Consistent system usage increases customer retention and supports ongoing revenue for Greenfield Local Hub.
View Products	As Emily, I want to view products with prices, stock, and producer information so that I can make informed purchasing decisions. As Anna, I want to view my products so that I can monitor inventory performance and sales trends.	1. Display all products with price, stock, and producer info 2. Products load correctly on all devices 3. Filters available by category or producer	Customers need to view available products before deciding what to purchase. Viewing products allows customers to access important information such as price, stock availability, and details about the producer. Providing transparent and detailed product information helps customers compare items and make informed purchasing decisions. Informed decisions reduce uncertainty and increase customer confidence when buying products. Increased confidence encourages customers to complete purchases rather than abandoning their shopping process. More completed

			purchases increase product sales, benefiting both the producers and the Greenfield Local Hub retail platform.
Search Products	As James, I want to search for specific products so that I can quickly find items I want without browsing the entire catalogue As Liam, I want to search my products so that I can quickly locate and update them in my dashboard	1. Search bar functional 2. Accurate results returned 3. Search results show price, stock, and producer	Customers need the ability to search for products within the system. Search functionality allows users to quickly locate specific products without manually browsing the entire catalogue. Faster navigation improves the efficiency and usability of the digital platform. Improved usability reduces frustration and makes the shopping experience more convenient for users. Convenient systems encourage users to return regularly to purchase products. Increased repeat usage results in higher sales and stronger customer loyalty for Greenfield Local Hub.
Place Order	As Emily, I want to place an order for collection or delivery so that I can conveniently get the products I need without visiting the shop in person As Anna, I want to receive notifications of new orders so that I can prepare the	1. Select products and quantity 2. Choose collection or delivery 3. Confirm order 4. Stock updates automatically 5. Notifications sent to relevant users	Customers need an online system to place orders for products. Online ordering allows customers to purchase items from local producers without needing to physically visit the retail outlet. Providing both collection and delivery options increases convenience and

	products in time for delivery or collection.		accessibility for different types of customers. Greater accessibility allows more people to use the service, including those with limited time or mobility constraints. An expanded customer base leads to an increased number of orders being placed through the system. More orders generate higher revenue for producers and support the continued success of Greenfield Local Hub.
View Order History	AS Emily, I want to view my past orders so that I can reorder favourite items easily or check details of previous purchases As Liam, I want to view fulfilled and pending orders so that I can track my sales and plan stock	1. Display list of past orders 2. Show date, items, status 3. Allow repeat or bulk actions	Customers need to view their previous orders to track their purchases. Order history provides a record of previously purchased products and transaction details. Access to this information allows customers to quickly reorder products they previously enjoyed. Simplifying the reordering process reduces the time required to make repeat purchases. Convenient purchasing experiences encourage customers to buy products more frequently. Frequent purchases increase customer lifetime value and provide a stable

			income source for the business.
Manage Account	As James, I want to update my personal details and preferences so that I can receive relevant notifications and track my orders accurately As Anna, I want to update my business details and product info so that my profile is always accurate and up to date	1. Edit personal info or role-specific info 2. Changes saved and confirmed 3. Validation applied	Users need the ability to manage and update their account information. Allowing users to update their personal details ensures that stored data remains accurate and up to date. Accurate information is necessary for functions such as order delivery, notifications, and account communication. Correct information reduces the likelihood of errors, delays, or miscommunication within the system. Reducing service errors improves overall reliability and customer satisfaction. Satisfied users are more likely to trust and continue using the platform in the future.
Loyalty Scheme	As Emily, I want to earn points on purchases so that I can get discounts or special offers on future orders As Liam, I want to view customer loyalty points so that I can assist customers with rewards and maintain accuracy.	1. Points calculated per purchase 2. Points/rewards visible in account 3. Redeemable at checkout	Customers need a loyalty scheme that rewards repeat purchases. A loyalty scheme provides incentives such as points, discounts, or special offers for regular customers. Incentives encourage customers to continue purchasing from the platform rather than switching to competitors. Encouraging repeat

			purchases increases the overall number of transactions made on the system. More transactions strengthen relationships between customers and local producers. Stronger customer relationships improve long-term revenue stability for Greenfield Local Hub.
Producer Dashboard	As Anna, I want a dashboard to manage products, stock and view incoming orders so that I can efficiently run my business and ensure timely fulfilment	1. Log in to dashboard 2. Update products and stock 3. View orders 4. Approve/deny updates	Producers need a dashboard to manage their products, stock levels, and incoming orders. A dashboard centralises important business functions into a single interface. Centralised management allows producers to update product information and stock levels quickly and efficiently. Efficient management helps ensure that product listings remain accurate and orders are fulfilled on time. Reliable order fulfilment improves customer satisfaction and trust in the service. Positive customer experiences encourage repeat purchases and promote the success of local producers.
Order Management & Tracking	AS Emily, I want to track my order status so that I know when my products will be	1. Status: pending, processing, ready, delivered	Customers need to track the status of their orders. Order tracking allows

	ready for collection or delivery As Anna, I want to update order status so that customers receive accurate updates.	2. Notifications sent 3. Real-time updates	customers to see whether their order is pending, processing, ready for collection, or delivered. Providing real-time updates helps customers plan when to collect or expect their delivery. Clear communication reduces confusion and prevents unnecessary customer enquiries. Fewer enquiries reduce workload for staff and producers managing the system. Improved operational efficiency allows the business to handle a larger volume of orders successfully.
Payment Handling	As James, I want to pay securely online so that I can complete my orders without needing to visit the retail outlet. As Liam, I want to receive confirmation of payments so that I can track which orders are ready to fulfil.	1. Multiple payment options 2. Secure transactions 3. Confirmation sent to all parties	Customers need a secure way to pay for products online. Secure payment systems protect financial details during transactions. Protected transactions increase customer confidence in using the platform for purchases. Increased confidence encourages customers to complete orders online rather than abandoning the purchase process. Higher purchase completion rates result in more successful transactions. More successful transactions increase revenue for Greenfield Local Hub and its producers.

Accessibility Features	AS Sophia, I want the system to support screen readers and adjustable text sizes so that I can place orders even if I have visual impairments. As Anna, I want the platform to be accessible so that I can manage my products regardless of any mobility or hearing challenges.	1. Screen reader support 2. Keyboard navigation 3. Adjustable text/contrast 4. All functions accessible	Users need accessibility features to ensure the system can be used by people with different abilities. Accessibility features such as screen reader compatibility, keyboard navigation, and adjustable text sizes help remove barriers for users with disabilities. Removing barriers ensures that a wider range of people can access and benefit from the digital platform. An inclusive system expands the potential customer base and ensures equal access to services. A larger customer base increases the number of potential purchases made through the platform. Increased purchases generate higher revenue and support the sustainability of local producers.
Notifications	As Emily, I want to receive notifications when my order status changes so that I am informed about collection or delivery times. As Liam, I want to receive notifications when a new order is placed so that I can prepare the products promptly.	1. Notification system functional 2. Users can opt in/out 3. Delivered reliably	Users need to receive notifications about important updates such as order confirmations and status changes. Notifications provide timely communication between customers, producers, and the system. Timely updates ensure producers can prepare orders promptly and customers know when their items are ready.

			Efficient communication reduces confusion and improves the reliability of the ordering process. Reliable service improves overall customer satisfaction and trust in the platform. Satisfied customers are more likely to return and continue using the system regularly.
Product Traceability	As James, I want to view the origin and production details of products so that I can make informed purchasing decisions and support local producers. As Anna, I want to add traceability details to my products so that customers can trust the origin and quality of my products.	1. Display producer and origin info 2. Production details attached to products 3. Editable by producers/staff	Customers need to view the origin and production details of products. Traceability allows customers to see which producer created the product and how it was produced. Providing transparent production information helps customers make informed and ethical purchasing decisions. Customers who value transparency are more likely to support local farmers and food producers. Supporting local producers strengthens the local agricultural economy. A strong local producer network improves the reputation and sustainability of Greenfield Local Hub.
Stock Control	As Emily, I want to be prevented from ordering out-of-stock items so that I am not	1. Stock updates with orders 2. Low stock alerts	The system needs stock control to manage product availability accurately.

	disappointed by unavailable products. As Anna, I want stock levels to automatically update with orders so that I can avoid overselling and manage inventory efficiently.	3. Prevent ordering of unavailable items	Stock control ensures that inventory levels update automatically when orders are placed. Automatic updates prevent customers from purchasing items that are no longer available. Preventing overselling reduces order cancellations and customer disappointment. Reducing these issues improves customer satisfaction and operational efficiency. Higher satisfaction encourages repeat purchases and helps maintain stable long-term revenue for the business.

Non-Functional Requirements

Performance		
Non-Functional Requirement	Justification	KPI
The system must deliver fast and consistent page load times across all user interfaces including the product catalogue, producer dashboard, and order pages.	Fast performance is essential for maintaining user engagement when browsing products or placing orders. If pages load slowly, customers may abandon the website before completing their purchase, which directly reduces potential sales for producers. Producers also rely on quick dashboard access to update stock levels and manage incoming orders efficiently. Maintaining strong system performance ensures a smooth user experience, increases order completion	1. 95% of pages must load within **2 seconds**. 2. Page load time must not exceed **3 seconds during peak traffic**. 3. Product searches must return results within **1 second**. 4. System performance must remain stable during **continuous 4-hour usage periods**.

	rates, and allows the platform to handle busy shopping periods such as weekends or seasonal demand without delays.	
Security		
Non-Functional Requirement	Justification	KPI
The system must securely protect all user and producer data using modern security practices including encryption and secure authentication	The GLH platform will store sensitive information such as customer details, account credentials, order history, and producer business information. If this data were exposed through a security breach, it could damage customer trust, harm the reputation of local producers, and potentially result in legal consequences under data protection regulations. Strong security measures such as encrypted storage and secure login authentication ensure that only authorised users can access their data. Protecting this information maintains user confidence in the platform and supports safe online transactions.	1. **100% of passwords must be hashed and salted**. 2. **100% of login requests must use secure authentication protocols**. 3. Account lockout after **5 failed login attempts**. 4. **Producer dashboard accessible only to authorised producers**. 5. **Zero unauthorised data access incidents**.
Scalability		
Non-Functional Requirement	Justification	KPI
The system must be scalable to support growth in customers, producers, products, and orders without requiring major redesign.	As Greenfield Local Hub grows, more local farmers and producers may join the platform, increasing the number of products and orders processed daily. If the system cannot scale effectively, performance could degrade during busy periods, resulting in slow loading times, failed orders, or system crashes. A scalable platform ensures that the system can handle	1. Support at least **500 concurrent users**. 2. System must support **1000+ product listings** without performance degradation. 3. New producers and products must be added **without system downtime**.

	future growth while maintaining performance and reliability. This allows GLH to expand its network of producers and customers without needing expensive system replacements.	
Capacity		
Non-Functional Requirement	Justification	KPI
The system must have sufficient storage capacity to maintain customer accounts, product data, orders, and historical transaction records.	GLH needs to store a large amount of data including customer profiles, product listings, order histories, and traceability information for local produce. This information must be retained over time for business analysis, customer support, and reporting. Without adequate system capacity, important data could be lost or the platform could become slower as records accumulate. Ensuring sufficient capacity allows the platform to maintain historical records and operate efficiently as the business grows.	1. System must support **10,000+ customer accounts**. 2. System must store **5 years of order history**. 3. System must process **100+ orders per hour during peak periods**. 4. **No data loss during high-volume usage**.
Reliability		
Non-Functional Requirement	Justification	KPI
The system must provide reliable access to product browsing, ordering, and producer dashboards with minimal downtime.	Reliability is essential for an online ordering platform. Customers expect to browse products and place orders at any time without interruptions. Producers also rely on the system to receive and manage incoming orders. If the system frequently crashes or becomes unavailable, customers may lose trust in the platform and choose other retailers instead. A reliable system ensures	1. System uptime must be **99.5% or higher**. 2. Any system failure must be resolved within **30 minutes**. 3. No more than **1 unplanned outage per month**.

	consistent access, supports daily operations, and protects the reputation of GLH as a dependable marketplace for local food products.	
Usability		
Non-Functional Requirement	Justification	KPI
The system interface must be simple, clear, and easy to navigate for both customers and producers.	GLH will be used by a wide range of users, including customers purchasing products and producers managing stock. Many users may have limited technical experience, so the system must be intuitive and straightforward to use. If the platform is confusing or difficult to navigate, users may abandon their purchase or require additional support. An easy-to-use interface reduces errors, improves efficiency, and increases the likelihood that customers will complete orders and return to the platform in the future.	1. **90% of users must complete an order without assistance**. 2. Average time to place an order must be **under 3 minutes**. 3. User error rate must remain **below 5%** during testing.
Accessibility		
Non-Functional Requirement	Justification	KPI
The system must comply with WCAG 2.1 Level AA accessibility standards to ensure it can be used by people with a wide range of abilities.	Accessibility ensures that the platform can be used by individuals with visual, hearing, or mobility impairments. By supporting screen readers, keyboard navigation, and adjustable text sizes, the system becomes inclusive and usable by a larger audience. Providing accessible digital services is also important for meeting legal requirements and ensuring equal access to online services. An accessible system allows more users	1. Full **WCAG 2.1 Level AA compliance**. 2. All pages must support **keyboard-only navigation**. 3. All images must include **descriptive alt text**. 4. Text must maintain **sufficient colour contrast ratios**.

	to purchase products and interact with the platform, increasing the potential customer base.

Risk Mitigation

Risk Description	Probability	Impact	Mitigation Strategy
Time Constraints	Significant	High	Break the project into smaller manageable tasks, use project management tools to track progress, and regularly review deadlines to adjust resources as needed.
Poor Project Planning	Significant	High	Develop a detailed project plan with input from all stakeholders; hold regular planning and review meetings to adjust scope and timelines proactively.
Scope Creep	Significant	High	Define clear project scope and requirements upfront; establish a formal change control process

			requiring approvals for any new requests or scope changes.
Communication Issues	Moderate	Significant	Set up regular, clear communication channels and meetings; use collaboration tools; encourage open feedback to avoid misunderstandings.
Resource Limitations	Moderate	Significant	Identify critical resource needs early; allocate resources carefully; arrange backup resources or cross-train team members to cover shortfalls.
Technology Limitations	Moderate	High	Evaluate technology stack early; choose scalable, well-supported platforms; plan for alternative solutions if limitations arise.
Software Bugs and Errors	Moderate	High	Implement iterative development with continuous integration and testing; conduct code reviews and automate testing to catch bugs early.
Compatibility Issues	Moderate	Significant	Test the system across different browsers, devices, and OS early in the development; use responsive design and compatibility frameworks
Data Loss	Low	High	Schedule automated regular backups, use redundant storage, and test backup recovery procedures periodically to ensure data safety.
Security Vulnerabilities	Moderate	High	Use strong encryption, secure authentication methods, regular security audits, and timely patching; conduct penetration testing.
Incorrect Product Information	Moderate	Significant	Implement data validation at input; provide clear guidelines and training for producers; allow producers to review and update their data regularly.
Order Management Issues	Moderate	High	Automate order processing where possible; implement checks for data consistency; monitor system for errors and have a quick-response support team.
User Adoption Risk	Moderate	Significant	Offer training and support for users; gather user feedback regularly to improve usability; run pilot tests before full rollout.
Payment Processing Errors	Low	High	Use trusted third-party payment gateways; implement transaction logging and reconciliation processes; provide clear error handling and customer support.

Stock Management Inaccuracies	Moderate	Significant	Automate stock level updates in real time; alert producers for low stock; provide dashboards for accurate inventory tracking.

UI Considerations

The Greenfield Local Hub (GLH) platform's user interface will convey a professional, modern, and welcoming tone, reflecting GLH's commitment to supporting local producers and delivering a seamless shopping experience for customers.

A neutral and natural colour palette inspired by earthy tones and fresh produce will be employed, ensuring strong contrast for excellent readability and compliance with accessibility standards. The overall layout will be clean, spacious, and well-organized, allowing users to easily browse products, manage orders, and access producer dashboards without feeling overwhelmed.

The design will adopt a mobile-first approach, recognizing that many users will interact with the platform via smartphones or tablets. Interactive elements such as buttons will be large, clearly labelled, and spaced sufficiently to minimize accidental taps. The navigation system will be simple and intuitive, featuring consistent menus and icons to guide both new and returning users smoothly through tasks like placing orders or updating stock.

Accessibility will be a core focus, integrating features such as readable font styles and sizes, responsive layouts that adapt fluidly across devices, and accessible form controls with proper labels and keyboard navigation support. User feedback mechanisms including order confirmations, error alerts, and status updates will be designed to be clear, concise, and easily understood, enhancing overall usability and fostering user confidence in the system.

By combining these considerations, the GLH platform will deliver an inclusive, efficient, and enjoyable user experience that encourages frequent use and supports the cooperative's mission.

Legal Consideration

Legal Guideline	Application
Data Protection & Privacy (GDPR/ Data Protection Act)	The system will collect customer personal information (names, addresses, payment details) and producer information. Ensure that all personal data is stored securely, used only for intended purposes, and customers/producers consent to data collection. Implement features like data encryption, secure login, and the ability for

	users to request deletion of their data. Clearly state privacy policies.
E-Commerce Regulations/Consumer Rights	The platform will allow customers to purchase products online. Ensure compliance with consumer protection laws: provide clear product descriptions, pricing, and delivery details. Allow customer to cancel or return orders in accordance with legal timeframes. Include transparent terms and conditions.
Intellectual Property (IP) & Copyright	Any content on the platform (Images of products, logos, text about producers, recipes, etc.) must either be created in-house, properly licensed, or have permission from the owner. Protect the software code developed by your company with copyright and consider trademarks for logos/branding
Accessibility & Equality (Equality Act / ADA standards)	Design the platform to be accessible to users with disabilities (e.g., screen reader compatibility, adjustable font size, colour contrast). This will ensure compliance with accessibility legislation and make the platform usable by a wider audience
Food labelling & Traceability Laws	Since platform includes product information for local food, ensure that details about allergens, origin, and ingredients meet nation food safety and libelling laws. The software should allow producers to input accurate traceability information
Payment Card Industry (PCI DSS) Compliance	If the platform processes payments, ensure compliance with secure payment standards, including secure storage of payment information, use of secure payment gateways, and encryption of transactions.
Marketing & Electronic Communications Regulations	For any marketing features (emails, loyalty discounts, newsletters), comply with laws such as the Privacy and Electronic Communications Regulations (PECR). Users should opt-in to marketing communications, and unsubscribe options should be easy to use.
Contractual & Liability Considerations	Clearly define terms between GLH and producers for order management, stock responsibilities, and digital platform use.

	Include disclaimers about liability for incorrect product information or delivery errors.
